

West Nile Virus Risk Assessment

St. Louis Encephalitis Virus Risk Assessment

Risk Assessments courtesy of VectorSurv.org. Mosquito abundance, environmental factors (temperature and rainfall), number of infected mosquito samples, number of dead birds, and number of human cases are scored and averaged by region.

West Nile virus mosquito samples

5-year average 2024

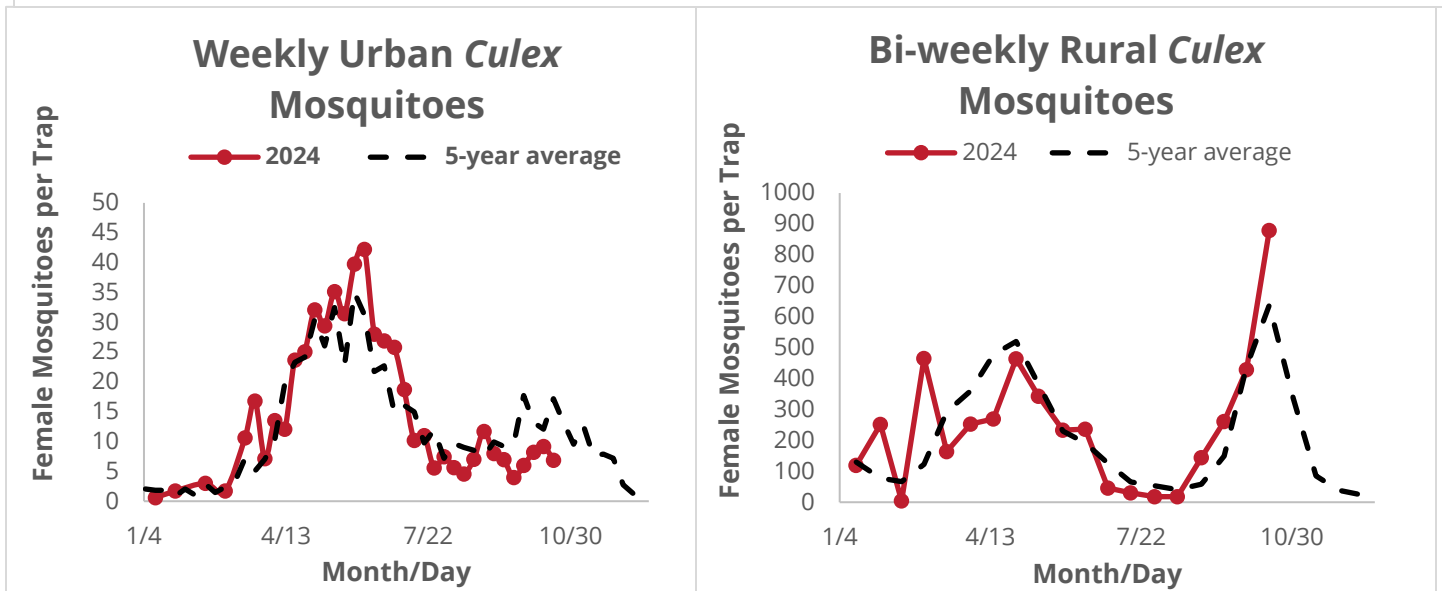

St. Louis Encephalitis virus samples

5-year average 2024

Culex mosquitoes 2024

Abundance of CO₂ and gravid traps for female *Culex* mosquitoes (vectors of WNV and SLEV). District-wide numbers are higher than the 5-year average for the first half of October (378 mosquitoes per trap). Rural mosquito traps are higher than the 5-year average for the first half of October (880 mosquitoes per trap). Urban traps this week are about half what the 5-year average (7 mosquitoes per trap; excludes Bubbling Wells).

*District-wide and rural are on 1/2 month; Urban are weekly comparisons

Five-year average includes 2019-2023. 2019 and 2020 included increased detections including new cities and communities.

This week's average was approximately 3 mosquitoes per trap; last year's was approximately 11 mosquitoes per trap.
